### DETAILED ACTION

This office action is in response to the amendment filed 11/30/09. Claims 19 and 20 have been amended. Claims 1 – 10 and 21 – 24 are cancelled. Claims 28 and 29 have been added. Claims 11 – 20 and 25 - 29 are now pending.

### REASONS FOR ALLOWANCE

Claims 11 – 20 and 25 – 29 are allowed.

The present claims are allowable over the closest reference of Vandenhende et al (US 2003/0119925).

The following is an examiner's statement of reasons for allowance:

Applicant claims a process for recovering at least one polymer in solution in a solvent which comprises precipitating by means of a non-solvent, wherein the precipitation takes place in a medium comprising two dispersants of which one (dispersant (I)) has greater affinity to the non-solvent and the other (dispersant (II)) has a greater affinity for the solvent and wherein the dispersant (I) has a DH of 65% to 90% and the dispersant (II) has a DH of less than or equal to 60% and wherein the dispersants are polyvinyl alcohols having different degrees of hydrolysis, the dispersant (I) having a degree of hydrolysis (DH) greater than that of dispersant (II). Applicant also claims said process wherein the non-solvent is introduced gradually into the precipitation medium and, in the course of this introduction, there is a first phase inversion (into a continuous phase rich in solvent, in which the polymer is dissolved, and into a disperse

Art Unit: 1796

phase, consisting of droplets rich in non-solvent) and then there is a phase inversion (the continuous phase then becoming the phase rich in non-solvent, and the disperse phase becoming the phase rich in solvent containing the dissolved polymer) and wherein the dispersant (I) is primarily added to the precipitation medium before phase inversion and the dispersant (II) is primarily added to the precipitation medium after phase inversion. Applicant shows unexpected results of improved apparent specific gravity (ASG) to diameter ratios when the methods of the present invention are applied.

Vandenhende discloses a process of recovering a polymer dissolved in a solvent which comprises precipitating with a non-solvent in the presence of one dispersant, such as polyvinyl alcohol. The dispersing agent is preferably added in the beginning of the dissolution of the plastic but can also be added at the same time as the non-solvent. The non-solvent is added gradually into the solution.

No prior art teaches or fairly suggests the claimed process of adding two dispersants each with a different degree of hydrolysis, wherein dispersant (I) has a DH of 65- 90% and dispersant (II) has a DH of less than or equal to 60% or wherein dispersant (I) is added to the precipitation medium before phase inversion and dispersant (II) is added to the precipitation medium after phase inversion to obtain the unexpected results improved apparent specific gravity to diameter ratios.

Art Unit: 1796

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRANCES TISCHLER whose telephone number is (571)270-5458. The examiner can normally be reached on Monday-Friday 7:30AM - 5:00 PM; off every other Friday.
